

# Keeping track of both ends

## System-wide Solutions

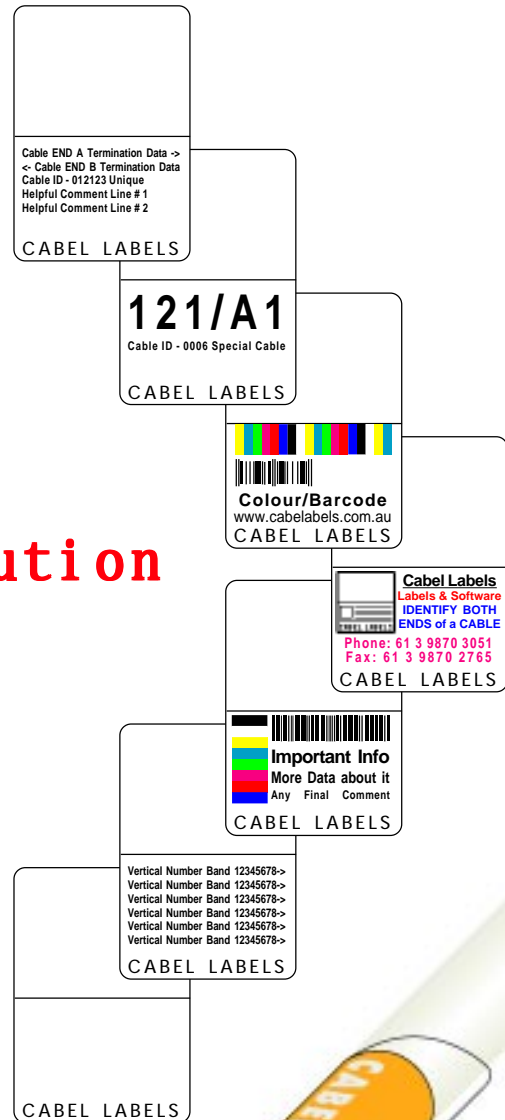

Cable Labels - Cabel Labels Pty Ltd has made it possible to reduce the inventory of Cable Identification products and systems, but still provide all methods using one set of consumables and software: Colour Bands, Number Bands, Barcodes, Company Logo's, Cable Numbers, Wiring Descriptions, Colour Text, etc., used individually or grouped together in any combination

## all the Solutions

One System

It stores Termination Details, Cable Data, Connector Data, Jumpering, Wiring Specifications and general data for every cable in a form ready for production/installation, no CAD Systems or similar are required.

Hence every signal, on every connector, may be documented using this system, a library with many Cables, Connectors and Wiring configurations ready to use is provided.

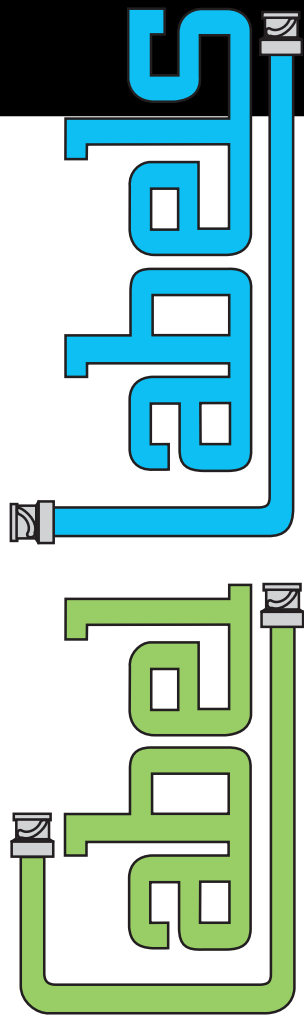

## The Cabel Solution

- 1 Clearly identifies both ends of a cable and documents its function — on the cable.
- 2 Enables cables to be followed through a system without circuits, drawings, cable lists or schedules.
- 3 Allows simple and reliable reuse of redundant cables.
- 4 Ensures that rearranged or temporarily removed cables are simply and reliably restored.
- 5 Increases the efficiency and decreases the cost of installation.
- 6 May be applied to new and existing cables (before or after termination).

### applications

Data & Voice  
 Communications  
 Broadcast  
 TV & Radio  
 Production  
 Facilities  
 Computer  
 Networks  
 Control &  
 Power Systems  
 Security  
 Plant Wiring  
 and any other  
 situation  
 where the  
 management and  
 maintenance  
 of cables  
 is important.

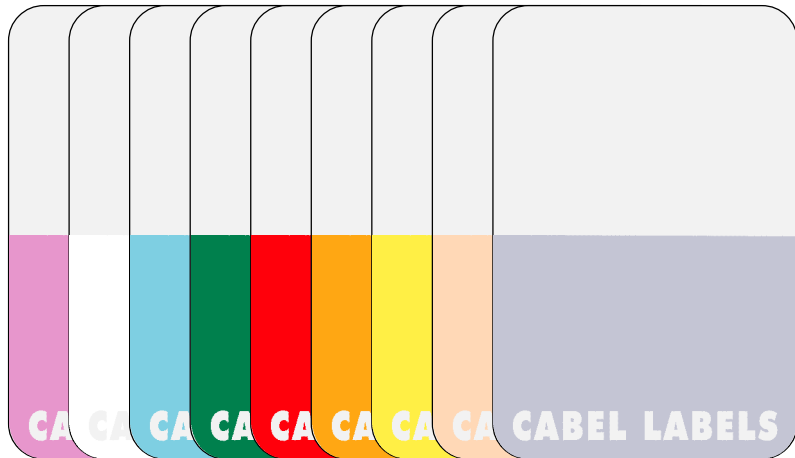

## Cabel Labels are available in two sizes

Different colours may be used for each type of cable. E.g., Red for power, yellow for data, white for vision etc. this approach makes it very fast and simple to know a great deal of information about a cable from a distance.

Information is placed on the writing end of the Cabel Label (coloured section). The Cabel label is then wrapped around the cable, eventually the writing area is covered by the clear section which seals and protects all the information. For further information please ask for a [Cabel Label Specification](#).

Cabel Labels manufactures several Cable Management Systems. These vary from very simple Label Printing programs (MSDOS™ based) to flexible and powerful Database Systems (Windows™ only).

The Cabel Labels Windows™ System provides: Full Database with searching/sorting etc. Custom Label layouts Reports to Printer or Disk Project Notes Cable Pair Information Connector Wiring Information and many other features designed to simplify the design, installation and maintenance of Cabling Systems. For further information please ask for a [Software Specification](#).

••type A•• suitable for cable diameters up to 10.2 mm

••type B•• suitable for cable diameters up to 30.4 mm
